EDUCATION

Mahendra College of Engineering

Information Technology B.Tech

CGPA: 7.58

Salem

2019 - 2023

Vedhha Vikass Higher Secondary School

Computer Science HSC

Percentage: 50%

Salem

2018 - 2019

SKILLS

Programming Languages: Java, Java Script, Node Js
Libraries/Frameworks: ReactJs, Tailwind css, Express Js
Tools / Platforms: GitHub, Netlify, HTML, CSS
Databases: MongoDB

PROJECTS / OPEN-SOURCE

Bus Route | **Link**

React, Express, MongoDB

The Bus_route project is a comprehensive system designed to provide users with information about bus schedules and routes. It offers a convenient way for commuters to plan their journeys more efficiently by accessing accurate data about bus arrival times and the specific routes they need to take.

Doctor Finder | **Link**

ReactJs, TailWind CSS, Express, MongoDB

The Doctor Finder project aims to provide a user-friendly platform for users to search and discover doctors based on their needs. It includes functionalities such as searching for doctors by specialty, viewing doctor profiles with details like qualifications and patient reviews, and booking appointments.

College Management System | **Link**

ReactJs, TailWind CSS, Express, MongoDB

A College Management System (CMS) built using the MERN stack (MongoDB, Express.js, React, and Node.js) leverages the power of modern JavaScript technologies to create a robust, scalable, and efficient web application.

Personal portfolio | **Link**

ReactJs, TailWind CSS

personal portfolio using React and Tailwind CSS is a great way to build a modern and responsive website to showcase your skills, projects, and achievements

Human Behavioral Emotion Predication

R Language

The objective is to develop a predictive model that can classify emotions based on text data extracted from WhatsApp chats. This project involves natural language processing (NLP) techniques to preprocess the text, extract relevant features, and train machine learning models for emotion classification
